

SNYDER-GREEN

Fuel Monitoring Solutions

Snyder Green utilizes Anova monitors to track the fuel level in your tank and provides customers with access to the XFLUID software platform.

This system can be used on generators and fuel cubes. Snyder-Green installs the monitor on any equipment you request—free of charge. Let Snyder Green ensure you never run out of fuel, so you can stay focused on running your business.

XFLUID Software

This actionable software provides industry-leading forecasting tools. The easy-to-use, web-based platform enables monitoring data to be viewed and sorted—from high-level overviews to detailed monitor information including:

- Pre-built standard reports
- Quick filters and sorting for fast, flexible access to information
- Customizable views of field-level data
- Export to XLS/CSV for complex data reports
- Advanced alert and notification options
- Integrated mobile app available
- View real-time tank levels
- Shows daily average use and days to empty
- Up to five people from your organization can access tank information
